

circlips pliers de neers

De Neers manufactures a robust range of high-quality industrial circlip pliers (also known as snap ring pliers) designed for installing and removing retaining rings. Their pliers are manufactured out of durable **Chrome Vanadium Steel** or premium non-sparking materials, featuring hardened and tempered tips for prolonged tool life.

Types of De Neers Circlip Pliers

De Neers offers four primary functional configurations depending on the design of the retaining ring and accessibility:

- **Internal Straight:** Designed to compress internal circlips inside a bore or hole.
- **Internal Bent:** Features a 90-degree bent tip to access internal circlips in tight, hard-to-reach recesses.
- **External Straight:** Designed to expand external circlips so they can slide over a shaft or pin.

External Bent: Combines a 90-degree angle with an expanding mechanism for restricted-access shafts.
