

You said: NUT NIPPLE OXY+LPG

A **Nut and Nipple set for Oxy+LPG** is a vital brass hardware fitting used to connect gas regulators or welding torches to flexible hoses in oxy-fuel cutting and heating systems. These components ensure a secure, leak-proof delivery of high-pressure oxygen and flammable Liquified Petroleum Gas (LPG). [\[1\]](#)

Because mixing up fuel lines can lead to explosive hazards, oxygen and LPG fittings feature completely different thread designs as a built-in safety standard. [\[1, 2\]](#)

Key Differences Between Oxy and LPG Fittings

5]	Oxygen (Oxy) Fitting	LPG (Fuel Gas) Fitting
Thread Direction	Right-Hand (RH) threads	Left-Hand (LH) threads
Visual Marker	Smooth, solid nut surface	Notched groove cut into the nut corners
Color Coding	Blue or Green hoses / markings	Red or Orange hoses / markings
Standard Size	Standard "B" size (typically 9/16"-18 RH)	Standard "B" size (typically 9/16"-18 LH)
