

You said: pneumatic fitting 4V 210 -08

The **4V210-08** refers to a highly popular **5/2-way directional pneumatic solenoid valve**, but users often look for the correct **pneumatic push-to-connect fittings** and **silencers** that screw directly into its ports. [[1](#), [2](#), [3](#), [4](#)]

## Port Sizes & Thread Specifications

To choose the correct fittings for a 4V210-08 valve, you need to match the specific female thread sizes of its five ports: [[1](#)]

- **Inlet & Outlet Ports (P, A, B): 1/4" PT / G Thread** (Approx. 13mm thread diameter). These require 1/4" male threaded push-to-connect fittings to connect your main air line and pneumatic cylinders. [
- **Exhaust Ports (R, S): 1/8" PT / G Thread** (Approx. 9.5mm thread diameter). These are typically fitted with 1/8" brass silencers/mufflers to quiet the air exhaust and block debris.
