

Hose connector

**Hose connectors** (also called fittings or couplings) are hardware accessories designed to join a hose to a water tap, a nozzle, a sprinkler, or another section of hose. Selecting the right type depends on your specific application, whether you are setting up a garden watering system, repairing a broken line, or connecting a high-pressure washer. ## Types of Hose Connectors

- **Quick Connectors:** These allow you to snap hoses and accessories together or apart in seconds without tedious screwing.
  - **Tap Adapters:** Threaded fittings that screw directly onto your outdoor faucet to provide a landing base for standard hose attachments.
  - **Hose Menders (Repair Kits):** Barbed inserts with outer clamps used to bridge two pieces of hose together after cutting out a leaking or burst section.
  - **Y-Splitters:** Dual-valve connectors that turn a single water outlet into two separate controllable channels. [[1](#), [2](#), [3](#), [4](#), [5](#), [6](#), [7](#)]
